

Holomorphic dynamics in dimension one : some advanced topics

François Berteloot - francois.berteloot@math.univ-toulouse.fr

Pascale Roesch - pascale.roesch@math.univ-toulouse.fr

Abstract:

In these lectures we pursue the study of one dimensional holomorphic dynamical systems using analytical and ergodic theoretical tools with a special emphasis on bifurcations phenomena.

1. Sullivan non-wandering theorem
2. Mane-Sad-Sullivan theory of bifurcations.
3. The Mandelbrot set.
4. Oseledets multiplicative ergodic theorem.
5. Lyapunov exponent and bifurcations.

Prerequisites:

Elementary topology, Complex analysis, Functional analysis, Measure theory, Our first semester lectures.
